Introduction:

The store location based on SVG for Magento 2 extension enhances your store visibility by showcasing all your locations on a personalized country map. You can easily integrate this map into the custom CMS page of your website, making it simpler for customers to find your stores.

Also, The customers can get additional information of the stores with the stores list. The admin can manage this additional information from the backend forms.

This user guide will help you manage Google Maps data within your Magento store using the Brainvire Google Maps extension.

Requirements:

- A Magento store with the Brainvire Google Maps extension installed.

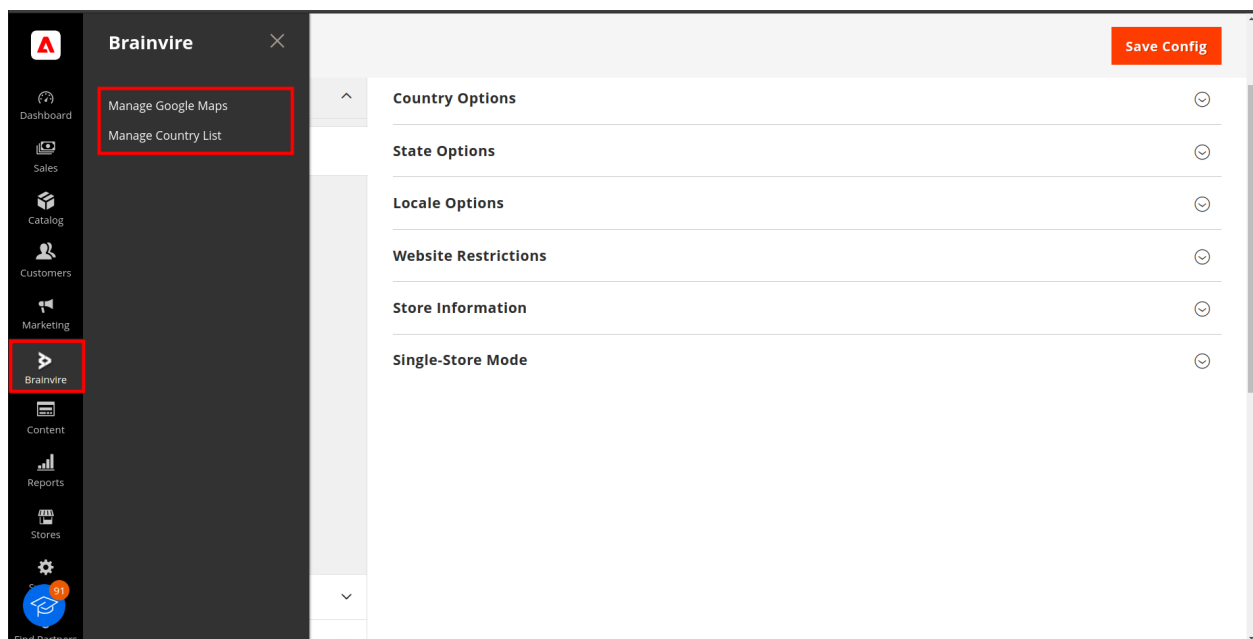

Installing the Store Location Based on SVG Extension

Installation Steps:

1. **Obtain the Extension:** Download the Store Location Based on SVG extension package.
2. **Extract the Extension:** Extract the downloaded ZIP file to a temporary location on your device.
3. **Upload Extension Files:**
 - Connect to your Magento store's root directory via FTP or SSH.
 - Navigate to the `app/code` directory.
 - Create a new directory named `Brainvire`.
 - Upload the extracted extension files and folders into the newly created `Brainvire` directory.
4. **Run Magento Commands:**
 - Open a terminal or command prompt and navigate to your Magento store's root directory.
 - Execute the following commands:
 - i. `php bin/magento setup:upgrade`
 - ii. `php bin/magento setup:di:compile`
 - iii. `php bin/magento setup:static-content:deploy -f`
 - iv. `php bin/magento cache:flush`

Getting Started:

1. Log in to your Magento admin panel.
2. Click on the **Brainvire** menu from the Sidebar.
3. You will see the following options:
 - **Manage Google Maps:** This option allows you to manage your Google Maps settings within the extension.
 - **Manage Country List:** This option allows you to manage the list of countries available for selection in your Google Maps.

Managing Google Maps

Viewing and Editing Existing Maps:

1. Click on **Manage Google Maps**.
2. The Google Maps grid displays a list of all configured Google Maps. Each map includes information such as:
 - ID
 - Name
 - Street Line
 - Website
 - Phone
 - Post Code
 - Country
 - Region
 - City
 - Email
 - Action
3. To edit an existing map, locate the desired map in the grid and click on the **Select** button under the **Action** column. This will redirect you to the Edit Location Information page.

Adding a New Google Map:

1. Click on the **Add New Google Maps** button.
2. This will also redirect you to the Edit Location Information page.

The screenshot shows the 'Add Google Maps Information' page within the Brainvire dashboard. The page has a dark sidebar on the left with icons for Dashboard, Sales, Catalog, Customers, Marketing, Brainvire, Content, Reports, Stores, and Find Partners. The main content area is titled 'Add Google Maps Information' and includes a search bar, a notification bell, and a user profile 'admin'. Below the title bar are 'Back', 'Reset', and 'Save' buttons. The form contains the following fields:

- Name *
- Website *
- Email *
- Phone Number *
- Select SVG Map * (dropdown menu with '--Please Select--')
- State/Region
- City *
- Street Line *
- Postcode (ZIP Code) *

Edit Location Information Page:

This page allows you to manage the details of your Google Maps. There will be below fields:

- **Location in Website:** Select the website where this map will be displayed on your website.
- **Name:** Enter a name for your Google Map (e.g., "Capital Territory 1").
- **Website Link:** Enter the website link of the location.
- **Phone Number:** Input the phone number of the location.
- **Country:** Select the country of the location from the dropdown menu.
- **State/Region:** Enter the state or region of the location from the dropdown menu.
- **City:** Enter the city of the location.
- **Street Line:** Enter the complete street address of the location.
- **Postcode (ZIP Code):** Enter the postal code of the location.

The screenshot shows the 'Edit Google Maps Information' page within a dashboard. The dashboard has a vertical sidebar on the left with icons for Dashboard, Sales, Catalog, Customers, Marketing, Brainvire, Content, Reports, Stores, and System. The main area has a header with 'Edit Google Maps Information' and navigation buttons: Back, Delete, Reset, and Save. The form contains the following fields:

Name *	Company #1
Website *	http://www.test/company1
Email *	test@gmail.com
Phone Number *	(901) 324-3125
Select SVG Map *	United States ▼
State/Region *	Alaska ▼
City *	Fort Wainwright
Street Line *	3448 Ile De France St #242
Postcode (ZIP Code) *	99703

Saving and Deleting:

- **Save:** Click the **Save** button to save your changes to the existing map or create a new map.
- **Delete:** Click the **Delete** button to permanently remove the selected map.

Managing Country List

Accessing the Country List:

Navigate to the appropriate section in the admin panel where the "Country List" option is located. Click on "Country List" to access the grid view.

Understanding the Country List Grid:

The Country List grid provides an overview of all configured countries. Each row represents a country and includes the following information:

- ID: A unique identifier for the country.
- Country: The name of the country.
- SVG Map: (Optional) A visual representation of the country's map in SVG format.
- Action: Option to edit the selected country.

Saving Changes:

- Click the **Save** button to update the information for the selected country.

Adding a New Country:

1. Navigate to the section where you manage countries within the admin panel. Locate and click on the "Add New Country" button or link.
2. This will open a form similar to the "Edit Country" page but with empty fields.
3. Fill in the required fields for the new country, typically including:
 - **Country:** Select a country from the dropdown list.
 - **SVG Map Upload:** Upload an SVG file representing the country's map.
 - i. **Admin SVG Map Download:** To obtain SVG maps, admins can click on the designated download link. This action will redirect them to a third-party website where they can download the desired SVG map.
4. Click the **Save** button to add the new country to the list.

The screenshot shows the 'Add Country' form in the Brainvire admin panel. The sidebar on the left contains navigation links: Dashboard, Sales, Catalog, Customers, Marketing, Brainvire, and Content. The top status bar displays a task message: 'Task "Rule processing: 2"; 1 item(s) have been scheduled for update.' with a 'View Details' link and 'System Messages: 23'. The main form area is titled 'Add Country' and includes a search icon, a user profile icon for 'admin', and buttons for 'Back', 'Reset', and 'Save'. The form contains two required fields: 'Country' with a dropdown menu showing '--Please Select--' and 'SVG Upload' with an 'Upload' button. A note below the SVG Upload field states: 'Please click on the SVG map to download it. [Click Here](#)'.

Managing Where to Buy Page

Accessing the "Where to Buy" Page

1. Navigate to **Content** -> **Pages** in your Magento admin panel.
2. Expand the **Filter** tab.
3. In the **Identifier** field, enter "where-to-buy".
4. Click **Apply Filters**.

This will display the "Where to Buy" page created by our module.

Modifying the Initial Country

To change the initial country displayed on the "Where to Buy" page and subsequently the available regions:

1. **Locate the Block:** In the content area of the "Where to Buy" page, you will find a block of code that looks similar to this:

Unset

```
{{block class="Brainvire\GoogleMaps\Block\Mapform"  
template="Brainvire_GoogleMaps::map.phtml"  
country_id="US"}}
```

2. **Identify the Country Code:** The `country_id` parameter within the code specifies the initial country. In the example above, "US" represents the United States.
3. **Update the Country Code:** Replace the existing `country_id` value with the desired country code. For instance, to display Australia as the initial country, change the code to:
HTML

Unset

```
{{block class="Brainvire\GoogleMaps\Block\Mapform"  
template="Brainvire_GoogleMaps::map.phtml"  
country_id="AUS"}}
```

4. **Save Changes:** Save the page to apply the modifications.

Note: Ensure you use the correct two-letter country code for the desired country.

By following these steps and guidelines, you can effectively implement and manage the get store location based on the SVG module, thereby enhancing the overall user experience on your Magento store.
